<p>i was brought a D206-664-017 kit to inspect after it was installed on QTY 10 cross tubes here at dart. when i was going to start checking the work order pick list to the IIN parts list i found that the qty's of parts were strange. when i started to read the DSI 9544-017 i then saw that the DSI calls for it to be installed in two places on the cross tubes. all the qty of cross tubes were only installed in 1 location. i then questioned the employee who was doing the install here and was informed that it was only installed in 1 location and that he thought it was strange that a grounding strap was installed in two locations on the same tube and took. the employee that was installing it was splitting up the qtys in the kits to do his install. all the cross tubes were inspected incorrectly. the kit was picked correctly having the right qtys of parts in it.</p>
